

**Size Large Plexidor**  
**Fitting Replacement Weather Seal to Plexidor Pet Doors**

Put a few dabs of silicone sealer in T-slot before inserting the weather seal. We use Duro Clear Silicone Sealer. Make sure both sides of the backing are in the T-slots. Use the back edge of a blunt knife in the T-slot to get the plastic backing in the frame. Trim off the weather seal as needed to fit.

#43. weather seal is the longest haired. This weather seal has 2 dotted lines running down the back side of the weather seal. This goes on the top and bottom of the pet door panels.

#33. weather seal is the shortest This weather seal has one straight gray line running down the back side of the weather seal. This goes on the spine of the pet door panel. (back edge of panel next to frame). and on the leading edge of the pet door panels.

\*Note : Older panels have adhesive back weather seal on the spines. That has been discontinued. You will need to update your panels or purchase a new basic door.
